#1: Curtain wall is being installed for levels 4 and 5 on the east elevation. Terra cotta panels are installed first and then get infilled with glass panels. Interior walls continue to be framed. Overhead, underfloor, and in-wall mechanical, electrical, and plumbing system install continues. #2: The steel for the west shafts, that carry utilities vertically through the building, is complete. Fireproofing of the steel members has begun.
#3: Glass on the south elevation is being installed. Some of the glass has a frit applied or is electro chromatic to help mitigate the southern sun. #4: In the photo above, a worker is prepping the concrete on one of the cores for the installation of the southern glass. #5: The grand stairs in the forum are being installed. The stairs are steel with terrazzo treads, and will appear as if they are floating in air when they are complete.
